Name : Dipesh Raghav
Roll no. : 2401010223
Course : B.Tech CSE

Assignment : 2
Course Name : DBMS
Submitted to : Ms. Mansi Kajal

Q1) Fill in the Blanks.

→ 1. Entity - Relationship (ER) Model
2. Relational
3. Object-Oriented
4. Integrity

Q2) Ans → In a healthcare system, data abstaction means hiding complex databases details and showing only the information that a user needs.

This makes it easier for a healthcare professional to interact with patient records.

The data abstraction helps in a way that :-

- It simplifies information access.
- And display only Role-Based information.
- It reduces complexity.
- It improves data security.
- And easier system maintenance.

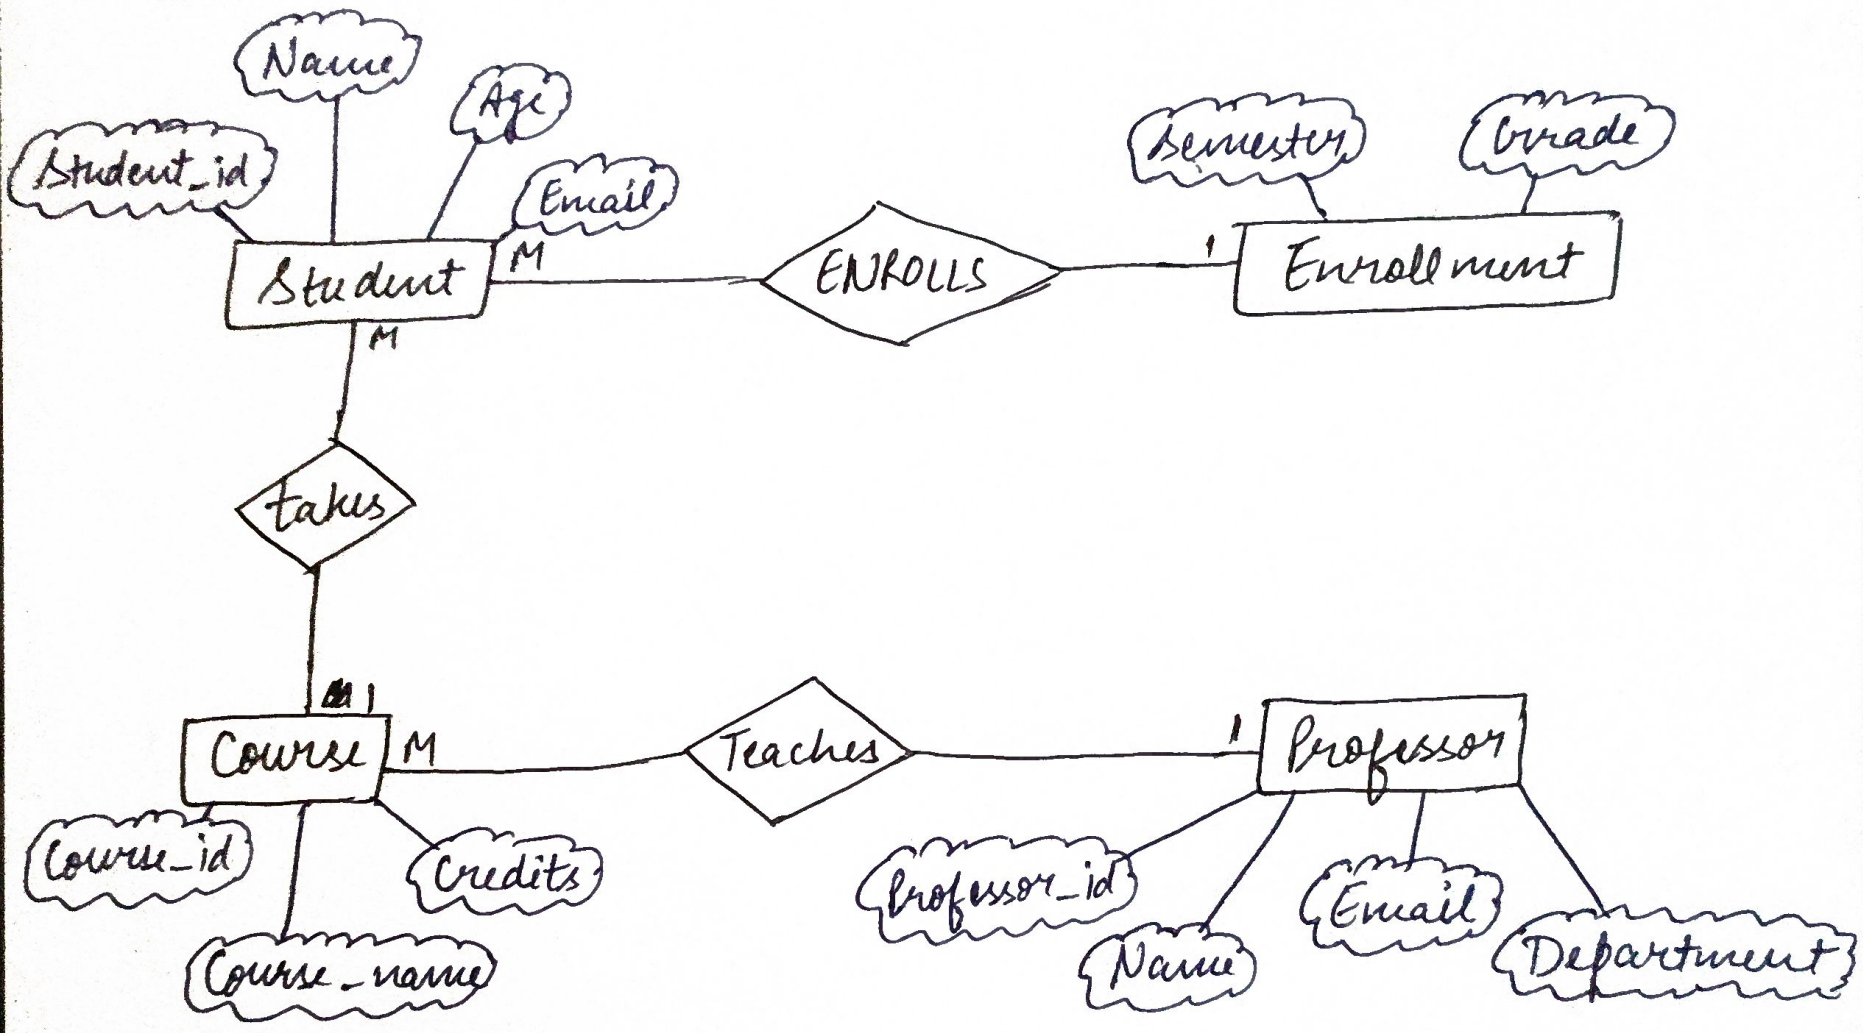
Q3) Ans → Benefits

1. Ease of use : Healthcare professionals can easily access patient information without understanding complex database structures.
2. Improved security : Sensitive patient data is protected because users only see the information they are authorized to access.
3. Reduced complexity : The system hides complex database operations and show only necessary data.

→ Challenges

1. System Design Complexity : Creating proper abstraction layers can be difficult and requires careful system design.
2. The challenges which can occur be performance issues.
3. Updating the system or fixing the errors can be a challenge for maintenance.

Q4) Ans →



- Students can enroll
  M to 1
- Students chose a course
  M to 1
- A professor teaches many courses
  1 to M
